CO-FOUNDER,
LEE LOVETT

A passion for lighting led to
the creation of the company.

ABOUT US

Our story begins in Soho, London in 2017. We struggled to find the right lighting for our own renovation projects, refurbishing historical buildings in one of the capital's most characterful neighbourhoods.

Passionate about interior design and with a firm belief in the transformative power of lighting, we saw an opportunity to create beautiful lighting, switches and sockets that are inspired by period properties yet adapted and technically enhanced for modern living.

Lighting that elevates and enlightens, is reliable, high performing and responsibly made; lighting that offers more than just good looks, marrying form with function for visual comfort and pitch perfect ambiance. So we set up The Soho Lighting Company, creating superior lighting solutions enabled by innovative technology to help you bring your home to life.

“Lighting can make or break even the most carefully designed interior. It is both an art and a science, with the ability to elevate a space and reveal its true potential.”

Lee Lovett, co-Founder & Creative Director

OUR Design philosophy

It's in the detail...

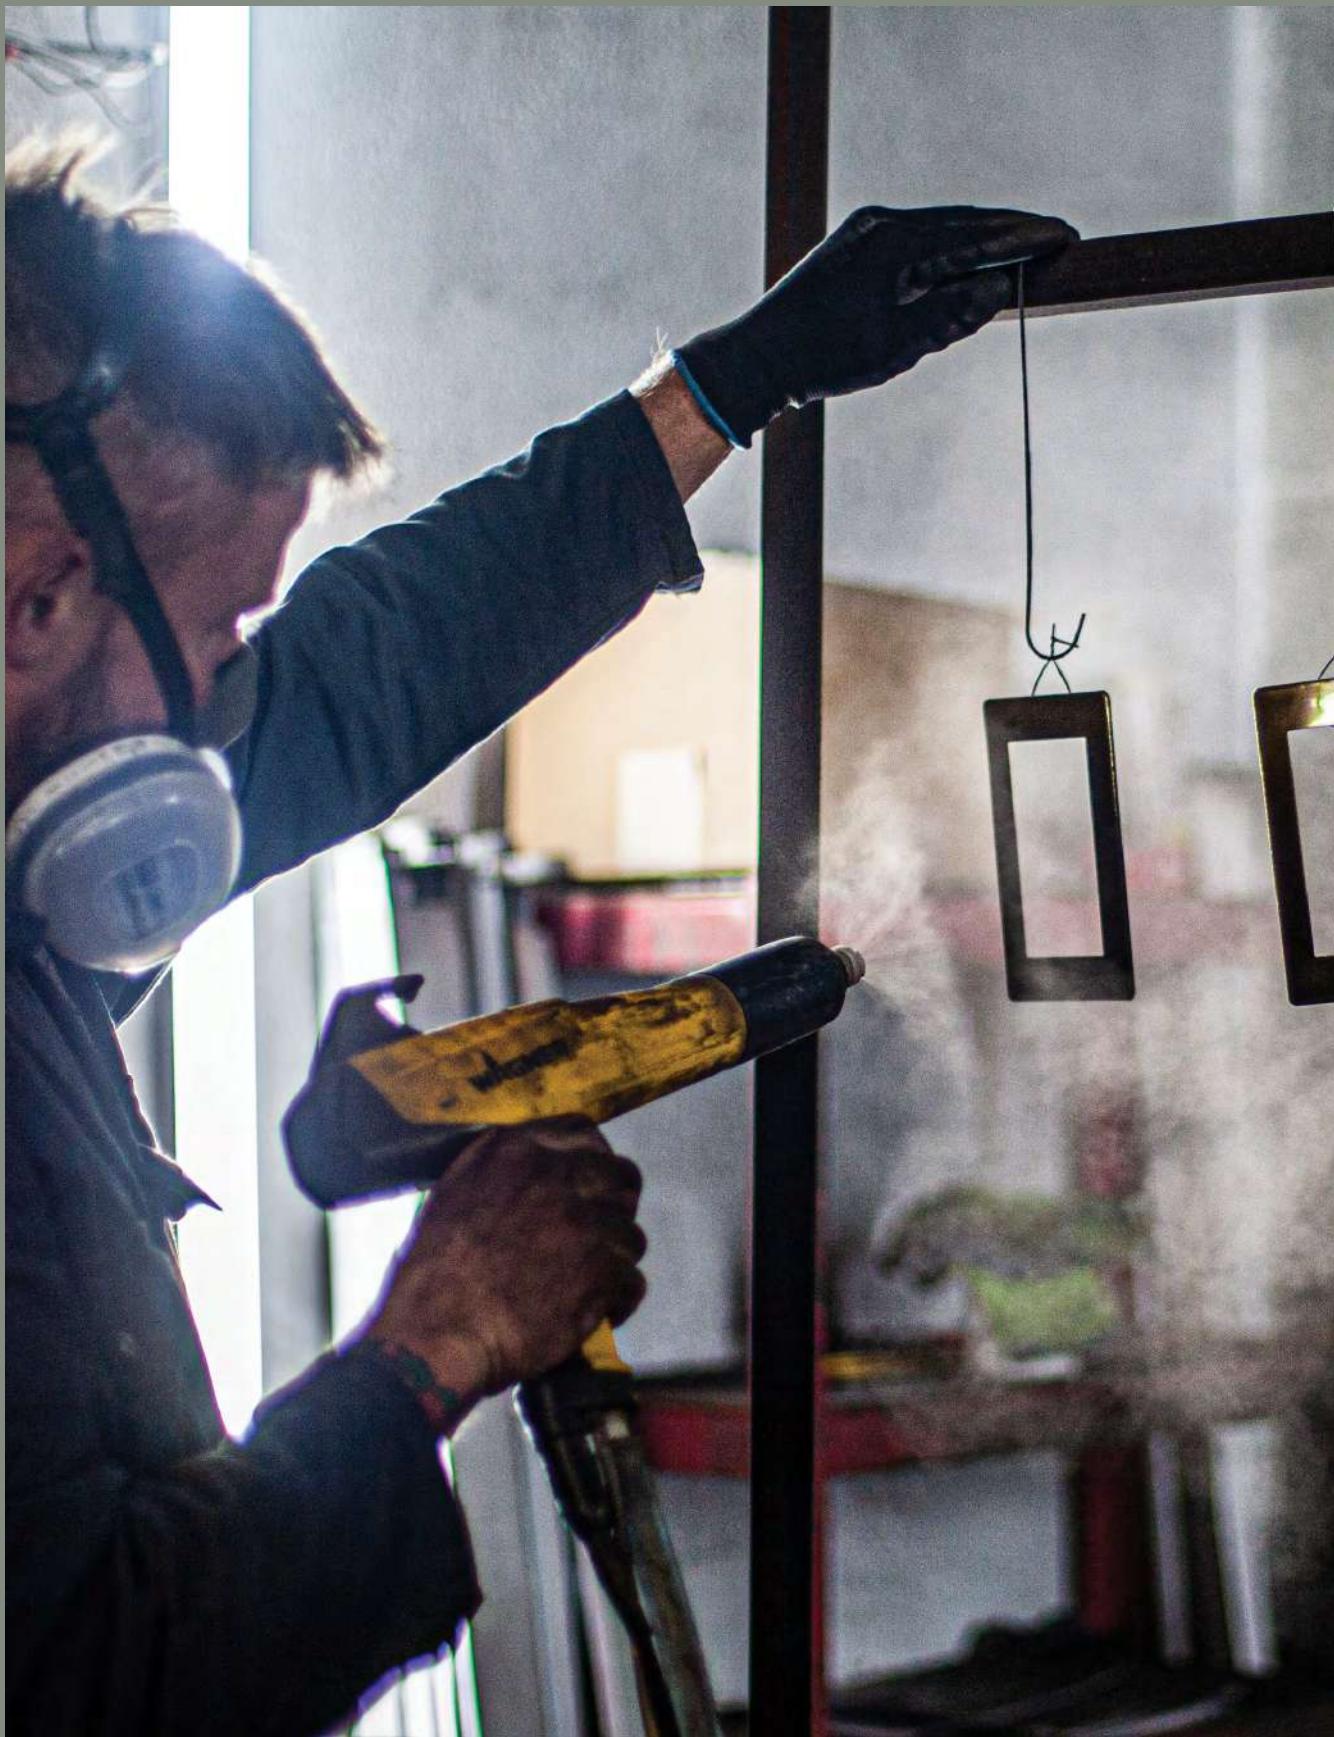

We engage more with switches and sockets than any other design feature within an interior.

Our switches and sockets are available in 12 exquisite finishes and four distinctive plate styles - traditional, minimalist, magnetic and panel-mounted - allowing you to create a truly unique and luxurious interior scheme where every detail is carefully curated.

From traditional finishes like Antique and Vintage Brass, paintable plates that seamlessly disappear into your paintwork, to more contemporary White Metal, you have a wealth of choice at your fingertips.

THE SOHO LIGHTING CO.

P.9

Our dedication to sustainability extends beyond our products to encompass people, the planet and our community.

Pioneering circularity in design

 **MADE IN[®] BRITAIN**

Sustainable quality without compromise

At Soho Lighting, our product design, development and manufacturing are guided by a deep respect for tradition and a profound understanding of the finite nature of our global resources. We embrace the timeless values of "built to last" and recognise the importance of responsible production. We are on a journey towards B Corp accreditation and are proud to have recently become carbon neutral.

Designing for longevity

From the very beginning, we rejected the modern approach of creating sealed, unrepairable units, driven by economy over style. Instead, we opted for our unique design philosophy that ensures durability and serviceability at every stage of the process. Our switches are built with a robust solid metal backplate utilising the highest quality materials and components. Each product is meticulously assembled, tested and finished by hand, undergoing a rigorous final inspection to meet our exacting standards.

Reducing plastic waste

Our dedication to sustainability extends beyond our products to our packaging. We've taken strides to reduce plastic waste, achieving a remarkable 97% reduction in plastic use in our packaging materials. It's a small step towards a greener future, but every step counts.

Peace of mind, guaranteed

We believe in the longevity of our products, and we back it up with a 15-year guarantee offered as standard on most of our items. This guarantee not only ensures outstanding looks, performance and durability but also provides enduring peace of mind to you, our valued customers. By choosing Soho Lighting, you're not just investing in quality, you're joining us on a journey toward a more sustainable and responsible future.

Innovation in lighting functionality

powered by Enkin technology

ENKIN

The perfect marriage of style and functionality

We are thrilled to introduce our first dimming toggle, which melds the functional aspect of a dimmer with the elegance of a toggle, powered by award-winning Enkin technology. Our dimming toggles are revolutionising the way we light our homes. Their multi-locational capability means you can separately dim from any number of toggles in the same room, allowing you to change the atmosphere, vitality and ambience of a space at the flick of a switch. This innovative technology is available across all our fabulous finishes, meaning you don't have to compromise your interior design vision.

The award-winning Enkin IDM250

in-line Dimming Module

The IDM250 dimming module is integrated behind the switch itself, ensuring a sleek appearance and allowing you to effortlessly dim up to 250 watts of LED lighting.

Simple installation and operation

Operating our dimming toggle switches is as simple as it is stylish. A quick flick turns the lights on or off, while a sustained hold allows you to adjust the brightness, fine-tuning your lighting to perfection. Your electrician can set both the sequence of your dimming and the levels of brightness you desire.

Our partnership with Enkin brings a host of key features that set our products apart:

Experience lighting that's not just visually stunning but also silent and flicker-free.

Silent & Flicker-Free Technology

- Experience lighting that's not just visually stunning but also silent and flicker-free.

Soft Start Functionality

- Enjoy a gentle illumination that gradually brightens, creating a welcoming ambience.

Auto Load Detection

- Enjoy intelligent lighting that automatically detects the load, optimising performance.

Large Load Capacity Dimming

- Robust dimming capabilities, with a capacity of up to 400W for LED lighting.

Full Short Circuit Protection

- Designed with your safety in mind, our products come equipped with full short circuit protection and in-built over current protection for worry-free operation.

Easy Push Button Setup

- Setting up your lighting scheme has never been easier. Our push-button setup simplifies the process.

Common Compatibility

- Our products are compatible with a wide range of LED lighting from over 60 leading brands, making them versatile and adaptable.

Automatic Overload Reset

- If an overload occurs, our products automatically reset, ensuring uninterrupted functionality.

Soho Lighting's

BESPOKE ENGRAVING
SERVICE

P.15

Personalise your space

Many of us experience the process of guessing which switch controls which set of lights. Our bespoke engraving service removes this frustration, enabling a clear and simple lighting navigation.

Our customisation service includes:

- Custom engravings with a selection of fonts
- Custom pairing of finishes with our extensive choice of toggle and dimming knob designs

We believe by providing these extra layers of customisation, your switches and sockets will truly reflect your unique style and design needs.

INDUSTRY EXPERTS

Our integrated approach to each project

When you choose The Soho Lighting Company, you are gaining the expertise of our team of professional electricians who, alongside our customer service team, aim to deliver your project with care, efficiency, and expertise. We offer wiring design, extractions from plan and lighting design scoping calls; with each project overseen by a dedicated account manager. From an initial call, through to project scoping, sample room creation, to site visits, and on-time delivery, we are on hand for the duration of your project.

For more information about this service, please contact our customer service team on 0208 106 1221 or by email at info@soholighting.com

P.21

Independent Lighting Plan Consultancy

We offer the opportunity to engage with an independent lighting consultant. Claire Pendarves originally trained and worked as an interior designer in London before changing course to specialise in lighting. For more information about this service, please contact our customer service team.

Introducing one of our valued
independent lighting consultants
Claire Pendarves

“ It was whilst working on an interior design project in Switzerland that a renowned lighting consultant was commissioned to carry out the lighting design. I realised that no matter what attention is paid to furniture, fabrics, flooring and window treatments it's the lighting predominantly that can totally transform a space. It can change a mundane interior into something spectacular. It can accentuate good features and help to detract from the negative. And it can make your life easier and more harmonious. ”

Residential Case Study

Clay Point

“I don’t think my husband and I would have ended up with what we’ve got, in terms of the lighting, if we hadn’t had a team working with us like Soho Lighting. They came up with so many ideas for us. We couldn’t have worked with a better company.”

Kate and Malcolm Roberts

This stunning coastal, residential project involved an extensive renovation, transforming this period property into a contemporary family home. Using our independent lighting plan service we advised the client in creating a full lighting solution.

P.23

Commercial Case Study

Hilton Hotel

The Hilton Metropole is the second largest hotel in London. We were delighted to be selected to provide the switches and sockets for this extensive hotel renovation. Our Connaught Collection in Black Nickel provided a sleek finish in the hotel bedrooms and our Charterhouse Collection in antique brass delivered a sophisticated and classic aesthetic for the bathrooms. Our ability to scale our service for large commercial projects is a quality for which we have become renowned, and we are honoured to extend our relationship with new Hilton hotels year on year.

The Historical Royal Palaces Collection

THE SOHO LIGHTING CO.

We are delighted to introduce this iconic collection which takes its inspiration from the grandeur and opulence of the royal palaces. Reflecting the history and character of these beautiful homes, it is elegant, timeless and refined. This pioneering collection of plates is patent pending and revolutionises the concept of flawless finish.

Hand-cast from solid metal this luxury screwless range will be available in Brass and Bronze finishes for exceptional quality.

A Considered Approach

Sustainability is central to our design process and business practices. From the choice of materials and manufacturing methods, to our consideration of a product's lifecycle and circularity, we are committed to making a positive impact on people and planet. We're in the process of our journey towards B Corp accreditation, on a mission to harness the transformative power of lighting to drive meaningful change.

"As we are both electrical engineers and artisans, our commitment to sustainability means that we examine the environmental impact of our products from electrical design through to creative development and delivery – and beyond."

Lee Lovett Co-Founder

Frequently Asked Questions

Switches and Sockets FAQ's

Q. How many lights do your switches drive?

A. Our light switches are rated up to 20 amps, meaning that one switch has a breaking capacity of 20 amps.

Q. Are your plates 'standard' sizes?

A. Yes, our faceplates are standard sizes, fitting standard mounting boxes.

Q. What mounting boxes are compatible with your collections?

A. 35mm back box for dimmers and 2 way switches, 47mm back box required for shaver sockets and dimming toggles

- 1 gang, 2 gang & 3 gang rocker switches,
- 2 way and off retractive switches required for electric blinds/windows
- 1 gang toggle switch & 2 gang toggle switch
- 1 gang dimmer and 2 gang dimmer switches

35mm double box

- Double sockets and USB double sockets
- 3 and 4 gang rocker / toggle and dimmers switches in double plates

35mm 6-8 gang pattress boxes

- Switch combinations of 5 gang up to 8 gang

Q. Do you offer retractive switches and what are they for?

A. A retractive switch refers to how the switch operates. As the switch has a spring in it, it retracts back to the off position. This style of switch is often used for dimming, smart home controllability and motor circuits such as blinds. We offer retractive switches in both rocker and toggle styles.

Q. What is the voltage and hertz of the range?

A. Our products are 230V / 50Hz.

Q. How do I find the ampage of your products?

A. All the information relating to the ampage of your product will be clearly marked on the product itself, on the product packaging, and in the technical specification sheets available on our website.

Q. What size cabling fits within your switches and sockets?

A. Our socket and switch terminal capacity allows for the following cable sizes:

- 4 x 1.0mm²
- 4 x 1.5mm²
- 2 x 2.5mm²
- 1 x 4.0mm²

Q. Are any of your switches and sockets rated for bathroom use?

A. We have dedicated bathroom shaver sockets, which are rated IP21D and therefore safe for use within zone 2 (within 60cm of the sink taps) of your bathroom.

Q. Are your switches single pole or double pole?

A. Our switches are primarily single pole isolating switches. Our sockets and appliance control switches are double pole isolators.

Q. Do you offer a variety of USB sockets options?

A. Yes, we offer both USB A (the older rectangle-style charging slots) and USB C options for a faster charge and greater power output.

Dimming Module FAQ's

P. 63

Q. What is trailing edge and leading edge?

A. These terms refer to how the dimmers cut into the electrical voltage wave. A leading-edge cuts into the wave earlier, whereas the trailing dimmer cuts into it later. Our dimmers as a standard are sent out as trailing edge but can be changed to leading edge. The only dimmer that can't be changed is the leading edge, that only comes as a trailing edge dimmer.

**Q. Do you offer soft start dimmers
and why would I require one?**

A. All our dimmers are fitted with soft start, trailing edge functionality with short circuit protection built in. The soft start allows the module to check the circuit is safe to operate within. It also prolongs the longevity of the modules and bulbs.

**Q. Can you remove the soft start
function if required?**

A. You cannot remove the soft start entirely, as it may incur flickering in a leading edge. However you can change the driving mode of the dimmer from trailing edge to leading edge if required. This would help bring the soft start time down.

**Q. Can I set a minimum and maximum
lighting output on your dimmer modules?**

A. Yes - this can be easily set and adjusted within the rear of the module.

**Q. What is minimum wattage required for
your dimming modules to operate?**

A. Our modules require a minimum load of 2W.

Introducing our Prebuilt Switch and Socket Options

In a world where modern control switching requirements continue to evolve, flexibility is paramount. The demands of today's residential and commercial applications, with their complex lighting schemes and integration of smart technologies, call for a vast array of switch combinations on a single plate. Within each range, you'll find our standard plates, carefully curated to meet the most frequently used requirements in both commercial and residential projects. Our standard prebuilt plates include:

Light Switches: Choose from toggle switches, intelligent trailing edge dimmers (perfect for LED lighting, but versatile enough to adapt to other light technologies), and rocker switches.

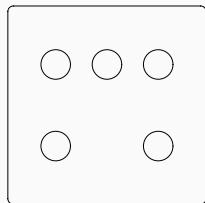

Sockets: Whether you need 5, 13, or 16-amp sockets, options with integrated USB chargers, or twin voltage shaver sockets, our range has you covered.

Fuse Spurs, Isolators, and Cooker Control Units: Discover a wide selection of 13ax, 20ax, and 45ax switched and unswitched plates for your electrical needs.

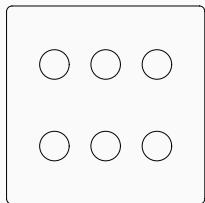

Media, TV, and Data Plates: Stay connected with our range of plates designed to accommodate your media, TV, and data requirements.

OUR GRID RANGE OFFERS

Endless Possibilities

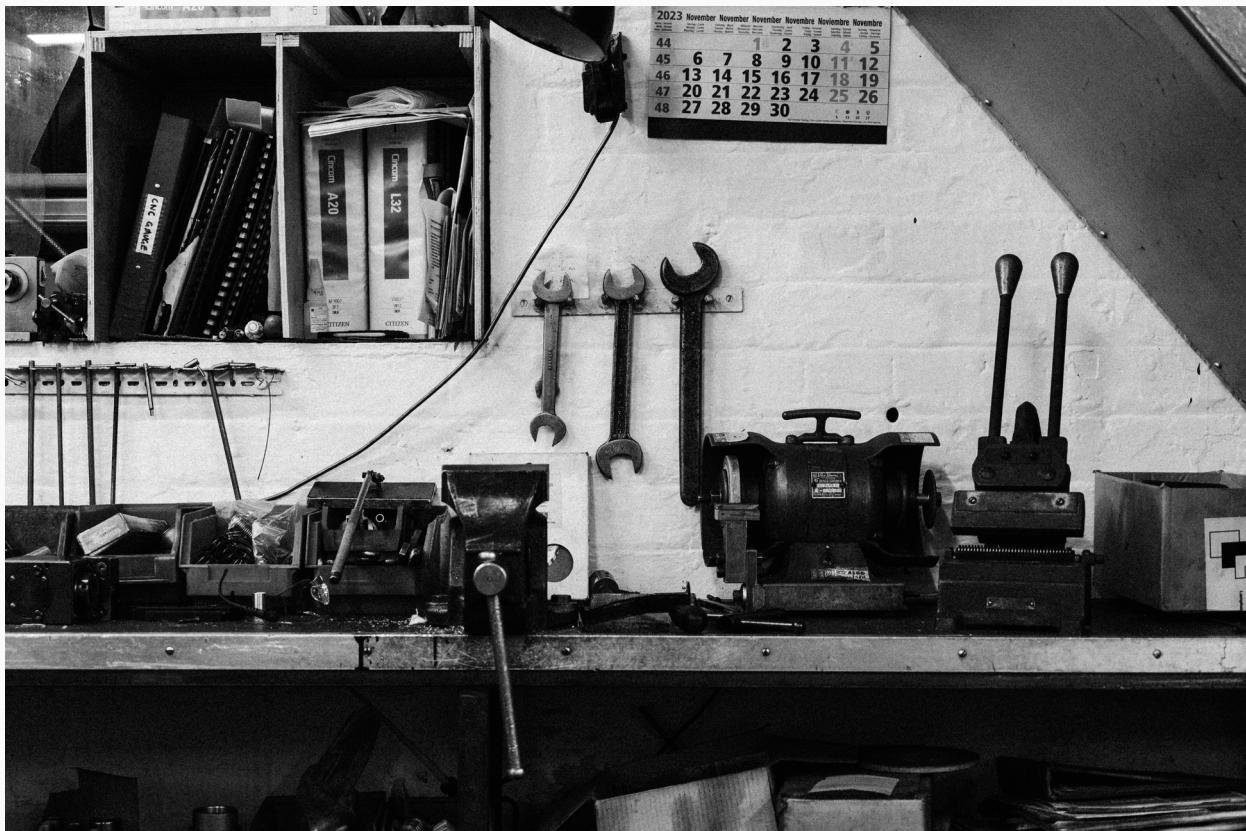

Through our highly flexible and adaptable plate systems, coupled with an extensive range of grid modules, we've made sure that you never have to compromise on aesthetics or functionality. Our flexible grid systems empower us to offer over 10,000 unique plate/switch combinations, readily available for next-day delivery. Whether you're matching round aperture grid modules for toggle and dimmer switches or rectangular grid modules for rocker switches, the possibilities are endless - all on a single plate.

Soho Combi-Grid® A Revolution in Choice

Not only have we meticulously crafted an extensive selection of products for each of our collections, we have pioneered the development of a proprietary combination grid system: the Soho Combi-Grid®. This innovation allows for the seamless integration of toggle, dimmer and rocker switches of any type and in any combination on a single plate, accommodating from one to 12 switch modules.

Front Loading Simplicity

At The Soho Lighting Company, we prioritise ease of installation. That's why all our grid plates are front loading. This ingenious design simplifies the installation process. Each module can be easily wired in and then securely clipped into place before the final touch - a flawless finish screwless faceplate - is fitted.

How to buy

You can explore our product offering online, in person at our London showroom or complete the order form on the following pages.

Specifier's guide

Our expert team are on hand to help guide your switch and socket choices every step of the way. If you can't find the answer opposite, please don't hesitate to get in touch with us.

Order Form

How to use our quick and easy order form to specify Soho Lighting products

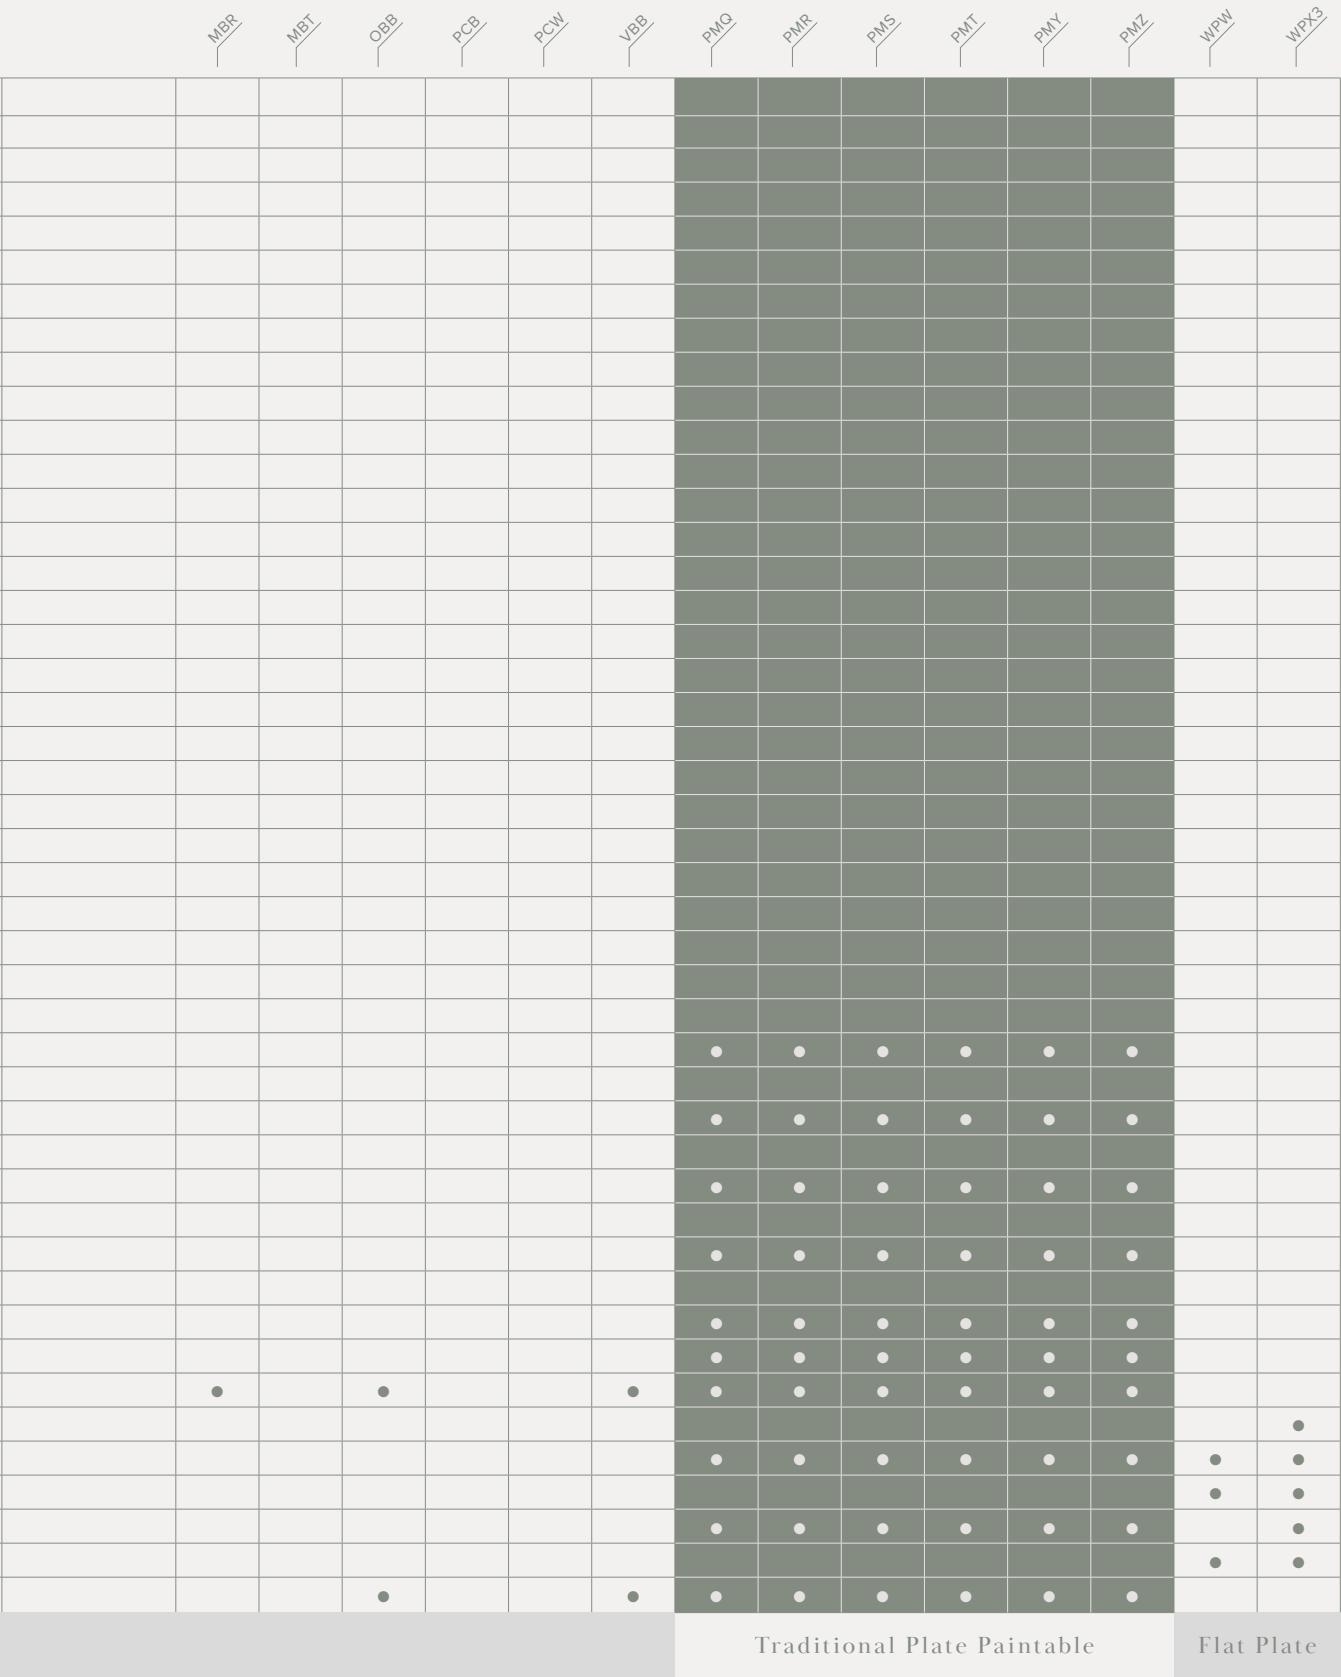

To use this form simply choose the type of switch or socket you require from the vertical list of code names on the left (see pages 84 to 95) and then navigate along the horizontal lines of the form to check if we offer the finish and plate option you require.

You can use this form to build out all your switch and socket requirements and then simply go online or contact us to place an order.

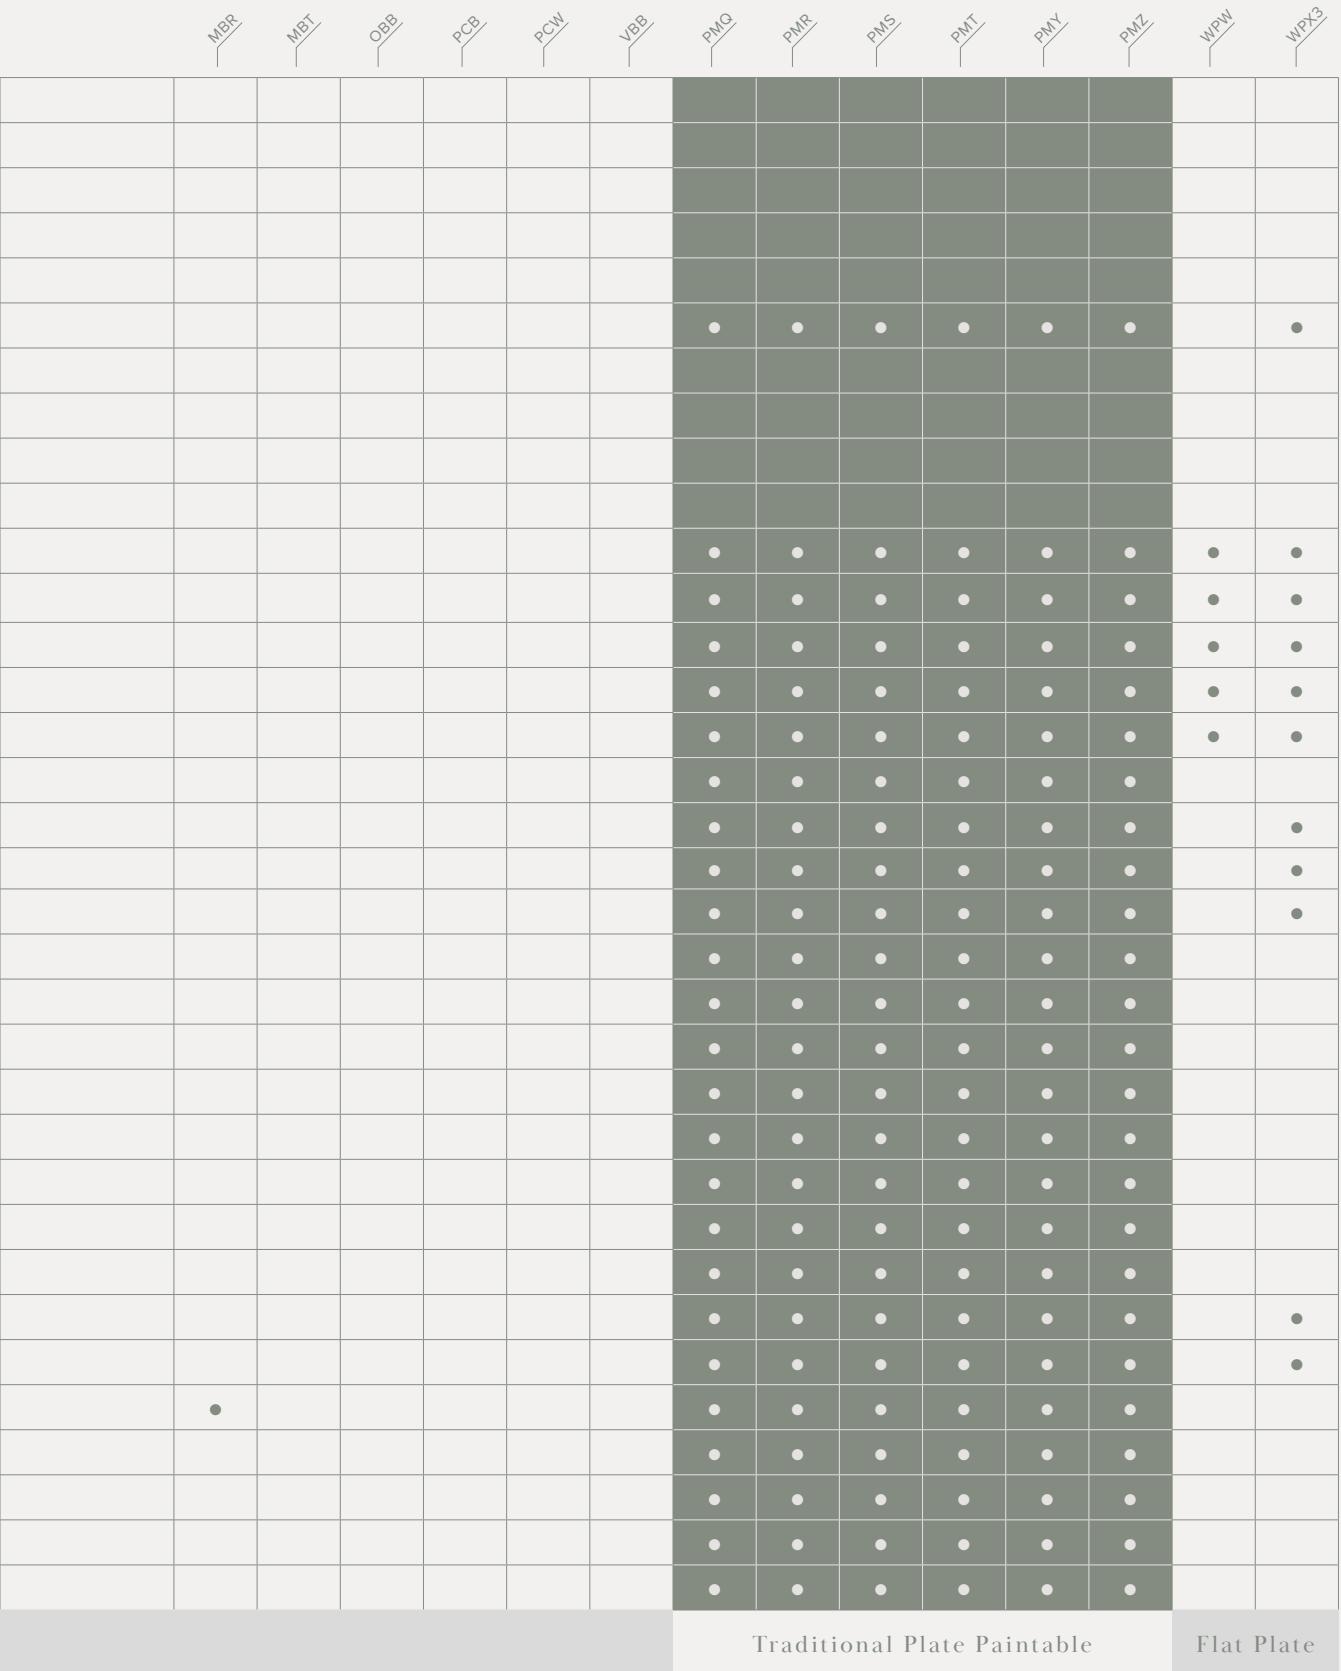

NB if the combination you require has a dot in it and is therefore not offered as a standard option, please do feel free to contact us and we will be happy to assist in any way we can.
